KOMO Product Certification and Lloyd's Register Product Certification, Industrial Quality Scheme for Product Certification by Surveillance of Quality Systems (approval No QIS 122).

As a passionate player in the market for rolled Titanium Zinc (Nederlands TitaanZink (NTZ)), NedZink is inspired each day by the demand from architects, designers and users for existing and new possibilities. This rich tradition dates back as far as 1892.

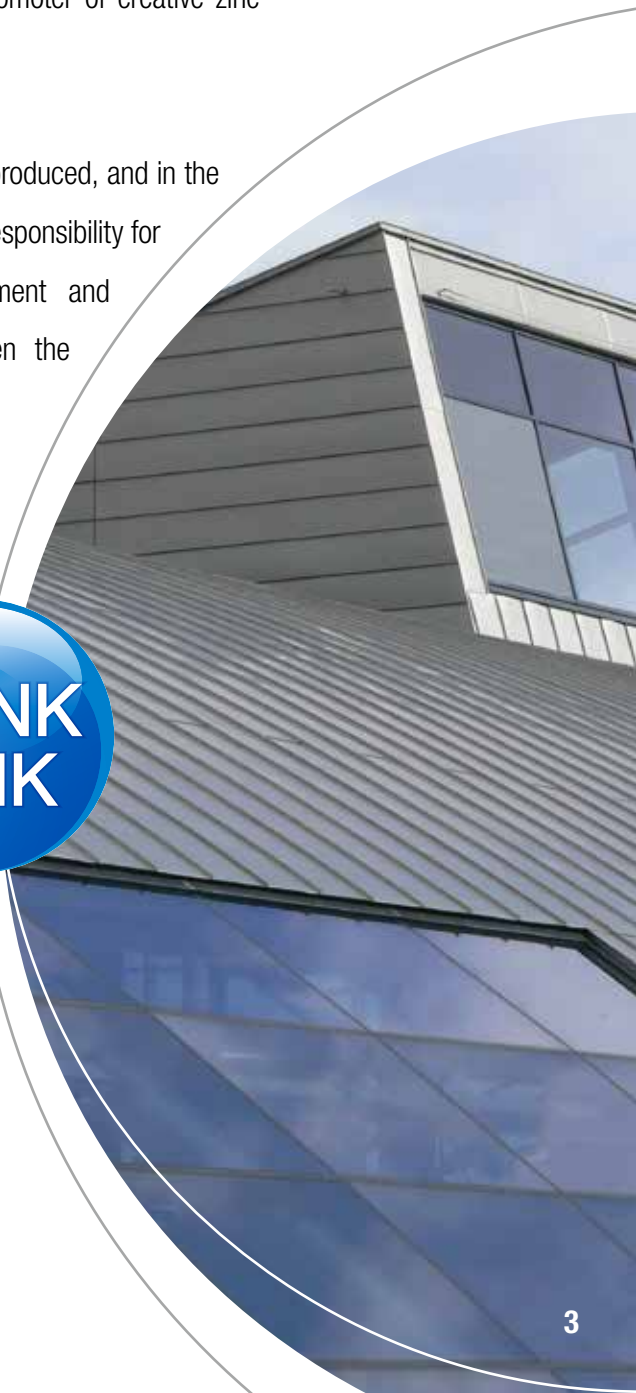

Since 1995 NedZink has been part of the leading international holding company Koramic Investment Group. Production takes place in the Dutch town of Budel-Dorplein. There are sales offices in the Netherlands, Belgium and Germany.

As the first producer of rolled construction zinc with quality assurance according to NEN-EN-ISO 9001:2008 NedZink is a stimulator of durable and technically high quality zinc applications. As a trading partner, NedZink is an inspirer with its reliable provision of knowledge, quality and service. As a market leader NedZink is a promoter of creative zinc possibilities.

The strength of NedZink lies in the A-quality and durability of the zinc produced, and in the long-standing tradition of deliberate entrepreneurship while accepting responsibility for people and the environment. Future-oriented business management and investments in up-to-date production techniques further strengthen the market position and create room for new developments.

In a nutshell, NedZink stands for proactive cooperation in all areas where zinc is involved: Think Zink.

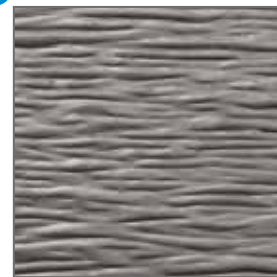

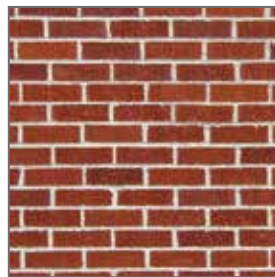

ORGANIC COMBINATIONS FOR A HIGH QUALITY AURA

As a natural product zinc can be organically combined with other materials. This increases the creative challenge to incorporate this building material in the high quality aura of both traditional and modern architecture.

Create with

CREATIVE APPLICATIONS

Taut lines, luxurious roundings, minute details or large gestures. Anything is possible with zinc. As a result, the architect is not restricted with the conception of creative zinc applications as a building material in roofs and façades, for exteriors and interiors, in homes or utility buildings.

attractive materials

INSPIRING DESIGN

FREEDOM GIVES ROOM FOR MANOEUVRE

Change, inspiration and growth are what construction activities are based on. This is why architects constantly require materials to allow them to come up with new and freer designs. NedZink helps create by making zinc suitable as a building material for all applications. In bands and sheets, but also for example in round forms. This design freedom gives the architect much room for manoeuvre in the creation of aesthetically appealing designs.

THE HIGHEST ACHIEVABLE QUALITY IN TITANIUM ZINC

Successive generations of craftsmanship and experience have helped NedZink with the development of the highest achievable Titanium Zinc quality. This premium quality material can be excellently moulded and processed in roof, outer wall and rainwater drainage systems.

Choose practical application

SPECIFIC ANSWER TO ANY PRACTICAL QUESTIONS

NedZink not only guarantees the very highest quality zinc. In practice users can also count on the supply of custom-made products and technical advice. Specific documentation gives answers to all practical questions. Thorough knowledge of zinc processing in the construction industry is passed on in courses given by our own practical instructors.

ns

EASY FOR THE USER

An essential consideration when choosing a building material is its processability. Plumbers, roofers, façade builders and other users of zinc are influenced in practice by the mechanical properties and technical quality of the material. This is particularly the case with special applications with high requirements as regards durability and flexibility.

ZINC HAS A NATURAL PLACE IN OUR PROCESS CYCLES

Zinc substantially helps the preservation of our environment. Thanks to the reduced acidity of rainwater, the already considerable life of construction zinc is becoming increasingly longer. Because zinc is 100% recyclable, the original metal can be used time and time again without losing its properties. This cuts the energy demand over the whole life cycle for (re)production, as well as emission quantities and waste.

THE BEST CHOICE FOR A LONG LIFE AND AN OPTIMAL IMAGE

As a building material in roof and façade cladding and rainwater drainage systems, zinc has ultimate sustainability because of its long life and because it can be used again afterwards. Architects who think zinc are particularly enthusiastic about the application possibilities and appearance. Clients are aware of the added value for their real estate. They can also count on the absence of maintenance costs. The government stimulates these deliberate choices which contribute to the protection and embellishment of the environment.

The zinc violet (*viola lutea calaminaria*) thrives very well under zinc rich conditions.

Think in permanent values

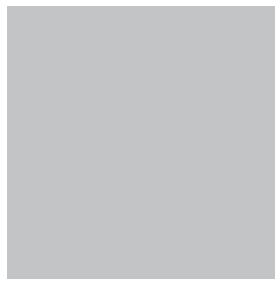

PEOPLE PLANET PROFIT

As a sustainable company NedZink subscribes to the Triple P of People, Planet and Profit. Making a profit may not be at the expense of people and the environment, so ultimately our planet. NedZink literally takes its raw material from the earth. Around a hundred years of developing and perfecting the production process offer the guarantee of a quality status well above European basic standards. The building material supplied by NedZink has its advantages in durability and aesthetic quality, making it impossible to imagine the construction industry today without it.

INVESTING IN EFFICIENT, MODERN TECHNIQUES

Being in tune with and changing with construction practices would not be possible for NedZink without structural investments in efficient and modern techniques. Each user of NedZink products can make use of this expertise as support in practice. All technical documentation is also always available online.

Look for new openings

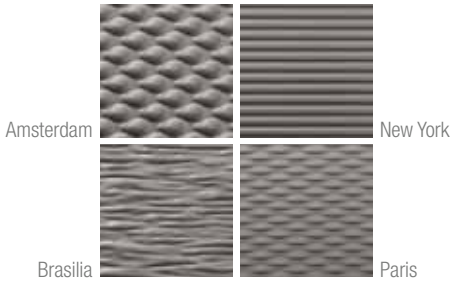

INNOVATION REMAINS FASCINATING AND INSPIRING

Besides thinking and acting on quality, NedZink constantly concentrates on the future. It seeks new openings in the application of construction zinc. Innovation is the guiding motive. As a material zinc has a centuries-old tradition. By constantly applying the existing product in new forms, it remains as fascinating and inspiring as a new discovery. A striking example of such a new opening in the market is NedZink NOVA, the prepatinated Titanium Zinc from NedZink. Made for modern, aesthetic building practice.

THE DEVELOPMENT OF NEW PROCESSES

Product innovations also mean finding new openings in production processes. This is the search for unprecedented technologies for the creation of new, mechanical and physical properties. To keep these developments in tune with the NedZink certified quality standard, the necessary innovations in process management are also needed each time.

Promotion of wide application

FLEXIBLE ANSWERS TO ANY POSSIBLE NEEDS

Through a network of suppliers, the NedZink range can be flexibly offered to satisfy any demand. This also applies for the delivery of smaller batches. Direct from stock, or custom-made to order. And always within the agreed delivery period. Thanks to a sophisticated, logistics organisation products can also be supplied just-in-time.

THE BASIS IS THE VERY COMPLETE

RANGE OF PRODUCTS OFFERED

As a sales partner for buyers and users in a world market, NedZink ensures the optimal availability of all its products. This starts with clear documentation on the wide range on offer. This varies from product information and current technical advice, to a concrete specifications service. The basis for the proactive market approach is always the very complete range offered by NedZink. From NedZink NATUREL to NedZink NOVA and NedZink NOIR, with or without structure, from strip to sheet zinc in all sizes, weights and thicknesses. From complete roof and façade systems, to custom-made rainwater drainage systems.

SUPPORT OF EXPERTISE DEMAND ON ALL FRONTS

To support wide application, NedZink organises workshops for architects and three-day zinc courses for zinc users. Its own Knowledge centre that can fall back on a long history of research and craftsmanship keeps all parties involved, both internal and external, constantly alert to all product aspects.

GUARANTEEING THE HIGHEST POSSIBLE QUALITY

The NedZink service starts with the guarantee of outstanding material qualities according to the highest European standards. This quality is visible to each buyer by a marked stamp on the product from the Lloyd's register certification body. All NedZink products are also periodically tested within our own certified quality system.

Our own website www.nedzink.com contains extensive technical documentation on the different systems. And the NedZink technical support department is on stand-by for immediate support and advice with application.
